## Homework 3

## MATH-1150-ES32&ES36

**2.2.59** To check whether the graph is symmetric with respect to the x-axis, I change y to -y, simplify, and compare with the original:

$$x^{2} + (-y) - 9 = 0;$$
  
$$x^{2} - y - 9 = 0.$$

This is different from the original, so the graph is **not symmetric** with respect to the x-axis. To check whether the graph is symmetric with respect to the y-axis, I change x to -x:

$$(-x)^{2} + y - 9 = 0;$$
  
 $x^{2} + y - 9 = 0.$ 

This is the same as the original, so the graph is **symmetric** with respect to the *y*-axis. To check whether the graph is symmetric with respect to the origin, I change both:

$$(-x)^{2} + (-y) - 9 = 0;$$
  
 $x^{2} - y - 9 = 0.$ 

This is the different from the original, so the graph is **not symmetric** with respect to the origin. To find the x-intercepts of this graph, I change y to 0 and solve for x:

$$x^{2} + (0) - 9 = 0;$$
  

$$x^{2} = 9;$$
  

$$x = \pm 3.$$

Therefore, the x-intercepts are  $\pm 3$ , or

(3,0), (-3,0).

To find the y-intercepts, I change x to 0 and solve for y:

$$(0)^2 + y - 9 = 0;$$
  
 $y = 9.$ 

Therefore, the only y-intercept is 9, or

(0, 9).
